Listening Comprehension

(30 marks)

Section A

1. W What can I do for you today?

M Well, today is the deadline for seniors to change their major.

W You're a senior, and you would like to change your major, and you haven't done so yet?

M Well, not yet. Honestly I don't know what to do.

W Let me help you. What field of study did you initially take interest in?

M When I got into college, I thought I would study psychology, but I ended up choosing biology as my major. But now I'm also interested in things like astronomy, public health and ancient art history. Now, I'm not so sure.

Question What are the speakers mainly discussing?

B 【解析】题目问对话双方谈论的主要内容。根据对话内容可知,男士马上面临转专业的最后期限了,但是由于他的兴趣爱好一直在变化,以至于不清楚自己应该选择哪个专业,就此向女士寻求帮忙,故选 B。

2. W John, I don't really see why humans had to send astronauts into space. Robotics is so much more advanced now, why can't they simply send robots?

M Well, robotics has come a long way and it's more expensive to send a manned spaceship into orbit, but the biggest problem with robots is that they have to be programmed for every possible eventuality.

W Yes, I suppose you're right. Robots just can't react to situations independently the way humans do—they still need us to tell them what to do.

M That's right.

Question Why can't robots be sent into space instead of humans, according to the speakers?

B 【解析】题目问机器人不能代替人类进入太空的原因。从对话中可知,人类选择送宇航员而不是机器人进入太空的最主要的原因是,机器人在没有为每一种可能性都进行编程的情况下无法独立应对各种情况,故选 B。

3. M Professor, I noticed on the campus website yesterday that you had placed an advertisement for a research assistant position. I was hoping you could describe a little about it for me. I might be interested in it.

W Well, it's a two-semester commitment; I don't want to hire someone and then find someone else halfway through the research. So, can you commit to two semesters as a research assistant?

M I'm not taking a full course load next semester, and I've planned on taking it easy the following semester, too. So I don't think the amount of time should be a big deal. Two semesters is fine. I mean, one or two or even three is OK for me.

Question What is the student's attitude towards the time commitment required?

C 【解析】题目问学生对被要求的时间承诺所持的态度。从学生的回答可知,下学期他的课程不满,时间比较宽裕,因此连续两个学期的助手工作对他来说不是问题,故选 C。

4. M Marcy, from this conversation alone it becomes apparent that your attitude about participation isn't at all what I'm looking for.

- W Sorry, Professor, I'm not really following. What are you looking for exactly?
- M Have you ever heard the expression "quality over quantity"?
- W Yeah.
- M What I'm getting at is that I don't only expect for my students to speak up in class. I also want to make sure that you are adding quality contributions to the discussion.
- W I'm sorry, but would you mind explaining what you mean by quality participation? I obviously have different ideas about what that is.
- M Marcy, I don't mean that your comments aren't interesting. But basically, some comments are more relevant to the discussion than others. It's those kinds of comments that the others can learn from. This is what we want, obviously.

Question What does the professor imply when he mentions "quality over quantity"?

D 【解析】题目问教授提到的“质量大于数量”的内在含义。从对话内容可知,教授不满意马西参与讨论的态度,他不仅希望学生在课上多发言,更重要的是在讨论中要多发表高质量的能够被别人学习的言论,故选D。

5. W Simon, could I ask you about how you started as an artist? You trained as a graphic designer. When you left university, did you work immediately as a graphic designer?
- M I started work as an illustrator first of all. I did about a year or so but then I went into the music industry.
- W And what did you do? Were you a musician?
- M Yes. I was in a band.
- W So how did you become an independent artist?
- M Well, I was still working as a manager, not really enjoying it very much, when a friend told me about a place called Spitalfields market, where artists selling contemporary stuff can rent a cheap stall. I drew the first thing that came into my head, some Japanese characters, photocopied and enlarged them, stuck them on some wood and put them on the wall at the market. And that was it. In the first week I had some really excellent sales and so I decided to carry on.

Question What made Simon become an independent artist?

C 【解析】题目问促使西蒙成为一个独立艺术家的因素。从西蒙的回答可知,当他还是经理的时候,在朋友的推荐下画了些日漫人物用于出售,结果销量很好,因此他决定继续做这份事业,故选C。

Section B

Conversation One

- W Hi, Martin. How are you doing with your Australian studies tutorial paper?
- M Oh, good. Fiona. I've finished it actually.
- W Lucky you. What did you do it on? (7) I'm still trying to find an interesting topic.
- M (6) Well, after some consideration I decided to look at the history of banana growing in Australia.
- W (8) Banana growing?
- M (8) Yes, banana growing. It's not as boring as you'd think. And I wanted to tie it in to the work I've been doing on primary industries and the economy. Anyway I bet there're a few things you didn't know about bananas, such as the fact that bananas were among the first plants ever to be domesticated.
- W Really?
- M Yes, they're an extremely nourishing food.
- W So where were these bananas first domesticated?
- M (9) According to my research, the Cavendish banana, which is a type of banana and the first type to be

cultivated here, actually originated in China (10) but they had a roundabout route before they got to Australia.

W You mean they didn't go straight from China to Australia?

M No, they didn't. It seems that in 1826, bananas were taken from South China to England.

W I suppose they would have made a welcome addition to the English diet.

M Yes, I'm sure. Well, apparently there was an English Duke who was particularly fond of bananas and he used to cultivate them in his hothouse, which is where you have to grow them in England, of course, because of the cool climate and they became quite popular in the UK.

Conversation Two

M Melissa, you've travelled to and written about over sixty countries, and seen some amazing things. But in a recent interview you said that your journey has only just begun.

W (11) I feel that way, yes. I think, as you see more, you realize there's more to see. You visit one country, then you want to go and see its neighbours. So I do feel I'm just starting.

M How many years have you been a travel writer?

W (12) A long time, more than thirty years.

M What changes have you seen in travel and tourism?

W Well, many. (13) I think these new airlines that offer cheap flights all over the world have made a big difference. People—not necessarily rich people—can now see more of the world, and I think that's a good thing.

M And there's a bad side too?

W Of course. I think, just as an example: Mount Qomolangma. It used to be probably the greatest challenge for any traveller. Well, now it's full of tourists. (14) Tour guides can take you up the mountain and you don't need any training because the guides do everything for you. There was the case of Sandy Hill Pitman in 1996. Her guides carried her laptop computer, coffee machine and luxury food up there. Now, for me, that's the bad side of modern tourism. You lose some of the mystery.

M Melissa, is there any advice you would give to young people who want to be travel writers?

W Yes, (15) I think the first thing is that you have to make time to write. Wherever you are—in a desert, on a boat, at the top of a mountain, you have to find the time. And if you do it every day, it becomes a habit. (15) The second thing is details. You must look for details. It's no good writing "The sunset was beautiful". You have to say exactly what colours you saw, how the sun felt on your face. (15) You have to be very detailed and look more deeply than most people.

Dictation

The ancient art of reading someone's palm has always been the most popular way of foretelling the future. After all, you don't have to believe it, and the best thing about it is that it doesn't require a lot of time or (21) expensive equipment. But many are skeptical that palm reading has any scientific basis at all. What could be more ridiculous than the idea that our future can be predicted from the random lines and creases on our

hands? Cynics claim that palmists use other clues to gain their “amazing” insights. In other words, the more (22) experienced and observant the reader is, the better she becomes at noticing things which help her to “predict” the future. While the more cynical the “victim” is, the less likely they are to believe a word of it!

However, scientists at the University of Barcelona have discovered that palmistry may have some basis in scientific truth. (23) Having compared the palms of 140 children, they discovered that the more arches and loops children have on their palms, the more likely they are to be intellectually impaired. And the existence of a Simian line—a rare crease across the palm—appears to be one of (24) the most reliable indicators of mental deficiency. This may be connected with events between the thirteenth and eighteenth weeks of pregnancy, a crucial time for brain development and the period when fingerprints are formed. So maybe there is some truth in what the palm reader says. And there is nothing more guaranteed to (25) cheer you up than the news that you’re about to meet a tall dark stranger who will change your life for the better!

Summary

Imagine the scene: you have an important exam tomorrow morning. Your future depends on it. You stay up all night, trying to memorize three or four years’ information in twelve hours. Sounds familiar? (26) But imagine you didn’t need to do this. Imagine you could just take a brain pill and immediately remember everything.

(26) A memory pill, or any other pill that wakes up the brain, is a great idea, not only for students, but for lots of other professions. (27) Soldiers, who have to function with just a few hours’ sleep, would welcome it. So would pilots on long trips, and shift workers who have to work with heavy machines at night.

But are we close to finding such a pill? A number of companies are already working on it. They see enormous financial possibilities in a pill that increases the memory, and laboratories have already been testing pills on both animals and humans.

(28) But a memory pill raises ethical questions too. Research tells us that the pill would be used not only by ill people, but also by people who just wanted to remember everyone’s name at parties, or the laziest students. Is this fair on poorer students who couldn’t afford the pill? Would businesses start asking their workers to take pills so that they performed better?

Medicine and its processes evolve. (29) Often, the original purpose gets lost. This has happened with plastic surgery. It may happen with cloning. The truth is, we don’t know how a memory pill would affect society. Fortunately, we probably have a few more years to think about it. (30) Most scientists believe that the drugs need much more testing. Some of these drugs work well with animals, but as one of the scientists says, “It isn’t clear that animals use the same kind of memories as humans. A mouse doesn’t have to remember a shopping list during the day.”

87. 8

解析 题目问的是图案中的问号应该用什么数字代替。观察所给的两组数字，可以发现，外侧两个数字相乘得到的结果等于内侧数字左右互换顺序后构成的数，即 $9 \times 7 = 63$ ； $5 \times 9 = 45$ ，所以 $6 \times ? = 48$ ，故问号处为 8。

88. C

A Survey About Adult Education

The charts show the results of a survey of adult education. Chart 1 gives their reasons for study and chart 2 shows how they think the costs of each course should be paid. From chart 1, we can see that 40% of people engage in study because they are interested in the subject. People who want to gain qualifications through study take up 38%, ranking the second. Next there follow the people who want to benefit and promote their work by further study. And those who want to meet people and change the jobs only account for 21% together. In chart 2, we can see that they hold the view that the fee should be shared among the taxpayers, employers and themselves, with the separate percentage of 25%, 35% and 40%.

From the two charts, we can draw the conclusion that adult education is important and necessary both for the benefit of the company and the individuals themselves.

Practical Skills Are More Important Than Certificates

People hold the belief that in today's job market it is more important to command practical skills than to get theoretical knowledge, and maybe there is no need for formal qualifications in the future. I can't agree with the statement more.

From my point of view, theoretical knowledge does not necessarily prove one's ability. It is not the paper qualifications but the ability to do the job well that really matters. The job applicants with high certificate will be eliminated some day if they don't improve their capacity continually. A research shows that the strong hands-on abilities attained at school are more likely to help them get higher earnings in later years. In Germany, students are expected to involve in working world to contact skills needed for future employment.

To conclude, we should focus on improving our capability rather than getting a certificate of no practical value in job market.
