

# 2025 年全国大学生英语竞赛决赛题(B 类)

## 2025 National English Competition for College Students (Type B – Final)

(Total: 150 marks Time: 120 minutes)

### Part I Listening Comprehension (30 marks)

#### Section A (5 marks)

*In this section, you will hear five short conversations. Each conversation will be read only once. At the end of each conversation, one question will be asked, and you have fifteen seconds to read the four choices marked A, B, C and D, and decide which is the best answer. Then mark the corresponding letter on the answer sheet with a single line through the centre.*

1. A. A writer.                      B. An editor.                      C. A reporter.                      D. An economist.
2. A. Embarrassed.                      B. Disappointed.                      C. Infuriated.                      D. Pleased.
3. A. How fast the car can accelerate.                      B. How good the car's audio system is.  
C. The direction the car is going in.                      D. The potential threat of car accidents.
4. A. They have only learned to cheat a lie-detector.  
B. They are unable to cope with the mental challenge.  
C. They don't know what the interrogator is going to ask.  
D. They have difficulty recalling what they have said.
5. A. It's difficult to find poisonous snakes nowadays.  
B. Snake venom may one day be used as medicine.  
C. Bites by poisonous snakes can ruin humans' nervous system.  
D. Scientists have found innovative ways to catch poisonous snakes.

#### Section B (10 marks)

*In this section, you will hear two long conversations. Each conversation will be read only once. At the end of each conversation, there will be a one-minute pause.*

## Conversation One

Listen to the conversation. Then read the **four** choices marked **A, B, C** and **D**, and decide which is the best answer according to what you hear. Then mark the corresponding letter on the **answer sheet** with a single line through the centre.

6. How old was Robert when he last entered the Tour de France?

- A. 50.
- B. 45.
- C. 41.
- D. 36.

7. What was Robert's motivation when he last entered the Tour de France?

- A. To achieve a personal goal.
- B. To prove something to researchers.
- C. To wind up his cycling career.
- D. To bring glory to his own country.

8. What does Robert say about physical deterioration caused by endurance sports?

- A. It seems to be faster in old people than in young people.
- B. It seems to be faster in women than in men.
- C. It starts to show earlier in women than in men.
- D. It starts to show earlier in old people than in young people.

9. Why are older men more liable to physical decline than younger men according to some studies?

- A. They take in less oxygen.
- B. They are trained less.
- C. They are unable to do endurance sports.
- D. They have more physiological problems.

10. What advice does Robert suggest people do when they try to improve fitness?

- A. Follow the coach's instructions strictly.
- B. Stick to whatever sport one has undertaken.
- C. Pick up an endurance sport if possible.
- D. Do one's desired sport appropriately with no injury.

## Conversation Two

Listen to the conversation, and complete the sentences according to what you hear with **one word** for each blank. Then write the answers on the **answer sheet**.

11. Martin Hanson, who is an \_\_\_\_\_, suggests that animals like wolves and lions might develop a sense of conscience as they live in groups.

12. It's believed that human social responsibility essentially developed from \_\_\_\_\_.
13. According to the examples given, when young dogs play roughly, those that bite too hard may be \_\_\_\_\_ out of the group.
14. Martin says that in one experiment Diana monkeys showed an in-built moral compass by sharing food with less competent peers without receiving any additional \_\_\_\_\_.
15. Martin believes what distinguishes humans from all other animals is \_\_\_\_\_

### Section C (5 marks)

*In this section, you will hear five short news items. Each item will be read only **once**. After each item, there will be a **fifteen-second** pause. During the pause, read the question and the **four** choices marked **A**, **B**, **C** and **D**, and decide which is the best answer. Then mark the corresponding letter on the **answer sheet** with a single line through the centre.*

16. Why does Peter Mackay suggest putting warnings on AI-generated books?
  - A. He is worried about their serious impact on new writers.
  - B. He believes they do more harm-than good to readers.
  - C. He thinks they lack original and creative ideas.
  - D. He is concerned they may contain unhealthy content.
17. When was basic language first formed according to Dr. Steven Mithen?
 

|                              |                                   |
|------------------------------|-----------------------------------|
| A. Around 200,000 years ago. | B. Nearly 500,000 years ago.      |
| C. Some 800,000 years ago.   | D. Roughly 1.6 million years ago. |
18. What did the two women use to try to break the glass case containing *the Magna Carta*?
 

|                    |                 |              |                  |
|--------------------|-----------------|--------------|------------------|
| A. A glass cutter. | B. A time bomb. | C. A hammer. | D. A steel tube. |
|--------------------|-----------------|--------------|------------------|
19. Why does the report say this tragic event in the Wales village was extremely rare?
  - A. Polar bears in Alaska had never attacked human beings.
  - B. It was the first fatal polar bear attack in over 30 years in Alaska.
  - C. It was the first time an Alaskan shot a polar bear in self defence.
  - D. A polar bear broke into a village school building in Alaska.
20. What is one of the main factors contributing to the worsening housing crisis in the UK?
 

|                                       |                                         |
|---------------------------------------|-----------------------------------------|
| A. An increase in affordable housing. | B. A decrease in rent prices.           |
| C. The reduction of homelessness.     | D. A shortage of qualified bricklayers. |

### Section D (10 marks)

*In this section, you will hear **one** monologue. The monologue will be read **twice**. After listening, answer the questions using **no more than three words**. Write the answers on the **answer sheet**.*

21. What did Samuel Morse's father believe was essential to a successful and fruitful life?

22. Which subjects did Samuel Morse major in at Yale College?
23. How long did it take Samuel Morse to design his first relay system?
24. What was the name of Samuel Morse's famous invention?
25. What did telegraph operators have to do to accurately decode messages?

## Part II Vocabulary & Grammar (15 marks)

*There are 15 incomplete sentences in this part. For each blank there are **four** choices marked A, B, C and D. Choose the one that best completes the sentence. Then mark the corresponding letter on the **answer sheet** with a single line through the centre.*

26. This is one of the rarest questions that \_\_\_\_\_ at such a press conference.  
A. is risen                      B. are risen                      C. has ever raised                      D. have ever been raised
27. The U.S. House of Representatives \_\_\_\_\_ 435 members.  
A. is composed of                      B. is comprised by                      C. consists in                      D. incorporates
28. Once we get to Rio, the rest of the journey should be \_\_\_\_\_.  
A. easy-going                      B. plain sailing                      C. calm waters                      D. light-hearted
29. We created two new fonts. The first font is quite light and thin, with a regular width. \_\_\_\_\_ the second one, it is much more condensed with a medium contrast.  
A. With reference to                      B. As for                      C. In contrast to                      D. Except for
30. To say that a soldier fought in battle like a lion may be a good descriptive \_\_\_\_\_, but it does not mean that he was on all fours, roaring and wagging his tail.  
A. analysis                      B. analogue                      C. anecdote                      D. analogy
31. An artist may have talent, but their style is the fruit of skills \_\_\_\_\_ through experience.  
A. imbued                      B. honed                      C. attributed                      D. resulted
32. I stayed in a hotel near the city centre, so that I could soak up the atmosphere in the \_\_\_\_\_ Old Market Square, where shoppers seek retail therapy, commuters rush about and students socialize whilst sipping takeout coffees.  
A. energizing                      B. invigorating                      C. bustling                      D. mingling
33. In Beijing, students who hold a university student card are \_\_\_\_\_ to a 25% discount on bus fares.  
A. permitted                      B. obliged                      C. licensed                      D. entitled
34. \_\_\_\_\_ the position you applied for has now been filled, we shall keep your details on file for future reference.  
A. Even                      B. Although                      C. Despite                      D. Nevertheless
35. With Howells, Henry James, and Mark Twain active on the literary scene, \_\_\_\_\_ became the major trend in American literature in the seventies and eighties of the 19th century.  
A. realism                      B. romanticism                      C. sentimentalism                      D. naturalism

36. In the midst of his \_\_\_\_\_, the man in the cocked hat demanded who the visitor was, and what his name was.
- A. puzzle                      B. complexity                      C. dilemma                      D. bewilderment
37. \_\_\_\_\_ for the timely investment from the general public, our company would not have been so thriving as it is.
- A. Be it not                      B. Were it not                      C. Had it not been                      D. Should it not be
38. Reg finally \_\_\_\_\_ his redundancy and stopped feeling so depressed about it.
- A. gave up on                      B. got the hang of                      C. made the best of                      D. came to terms with
39. W: The country would raise so much more in tax if the new policy targeted big tech companies.  
M: \_\_\_\_\_ They need to pay tax in all the places they sell goods.
- A. You've hit the nail on the head.                      B. Why do you let it bother you?  
C. It's a shame to hear the news.                      D. I think it's an unreasonable decision.
40. W: Have you heard that Chris and Marie have broken up?  
M: Yes, apparently he went out for drinks with a female colleague. I think Marie is making a mountain out of a molehill. It's not exactly a big deal.  
W: I'll see if I can help them get back together. They were such a good couple.  
M: \_\_\_\_\_ Don't get involved in other people's dramas.
- A. I'm sure that's a good idea.  
B. I can't imagine what has happened.  
C. I would leave well alone if I were you.  
D. I think we see eye to eye on that.

### Part III Cloze (10 marks)

#### Section A (5 marks)

Read the following passage and fill in the blanks with the correct forms of 5 words or phrases out of the 7 given in the box. Write the answers on the **answer sheet**.

~~try~~; ~~benefit~~; ~~similar~~; ~~regardless of~~; ~~give~~; ~~psychology~~; ~~against~~

Is the Universal Basic Income (UBI) the solution to a problem that has plagued the world since time began—the problem of people being too poor to live comfortably? The basic idea of the UBI is that every single person in society is (41) \_\_\_\_\_ a sum of money each month, from birth to death, to cover their basic needs, such as housing, clothing and nutrition. In other words, if they are working and

earning a significant salary, they still receive the UBI each month, just the same as someone who is unemployed, a child or unable to work for other reasons, like ill health.

The obvious question is how can a society afford a UBI? It would seem to go (42) \_\_\_\_\_ common sense—if everyone is given a lump sum of money throughout their life, the money has to come from somewhere. The short answer to this is that the UBI does require substantial tax rises among richer members of society to pay for it. What supporters argue is that although the rich would lose out in one way, by paying more tax, they and everyone else would gain by the lifetime security of knowing [that you never had to worry about the future]. A further possible upside of the UBI is (43) \_\_\_\_\_. In a modern society, the stress of job insecurity for many people is immense. Not knowing if you will keep your job in the long term, because of short-term contracts, zero-hour contracts and frequent dramatic changes in the labour market, often leads to stress, illness and depression. On top of that, many people (44) \_\_\_\_\_ worry about their accommodation—will they have enough money to pay the rent or mortgage, and will they be able to feed their children? The UBI takes away all this insecurity, and as a result, as well as the improvements to human life, the savings to the healthcare and mental health services would be astronomical.

So, has it been tried? Some local councils, such as Glasgow in Scotland, and even the country Finland have experimented with pilot schemes, but no country has launched a full-blown UBI scheme yet. Would it work? It would require a radical shift in our thinking about work, the state and the world, but in societies where the current benefit systems are not really fit for purpose, it is an idea certainly worth (45) \_\_\_\_\_.

## Section B (5 marks)

*Read the following passage and fill in each blank with **one** word in one of the following **three** ways: according to the context, by using the correct form of the given word, or by using the given letters of the word. Remember to write the answers on the **answer sheet**.*

When we try to remember past events, we nearly always remember positive memories more accurately than negative ones. For instance, we are much more likely to remember the details of when we got hired for a job (46) \_\_\_\_\_ when we got rejected for one. Equally, when we imagine the future, we often have a much more positive view of what is going to happen. When we are going into the hairdressers to have a new haircut (47) \_\_\_\_\_ (do), we often imagine it will look better than the actual results. Similarly, when you let someone redecorate your home, it may not look as nice as you imagined it would. So are these two experiences in any way connected?

A team headed by Karl K. Szpunar of Harvard University, have studied the connection between the two processes, to identify what is occurring on a cognitive level. (48) In \_\_\_\_\_, they ask the participants to tell them about various past memories. The team then asked their volunteers to incorporate these memories into imagined stories about the future, placing distant memories with recent ones to create new narratives. Much like when you got woken up from a dream where someone from your past was in the same scene as someone from your present. Szpunar and his team sometimes got participants to imagine a positive future and other times a negative one. The aim was to test how emotions would impact on something being more or less (49) \_\_\_\_\_(memory). A day later they asked the participants to retell the stories. All participants struggled to remember details of negative stories as accurately as positive ones.

The psychological phenomenon goes some way to explain our upbeat outlook. If our imagined future is based on our remembered past, and we forget the details of negative memories, it's not surprising that most of us look forward with (50) opti \_\_\_\_\_.

#### **Part IV Reading Comprehension (30 marks)**

*There are **three** passages in this part. Each passage is followed by several questions. Respond to the questions using the information from the passage. Remember to write the answers on the **answer sheet**.*

#### **Section A (10 marks)**

*Questions 51 to 55 are based on the following passage.*

We are constantly given advice on what is or is not good for our health—from the amount of exercise we should do to what diet we should be following. But what effect can our emotions have on us physically? Is being angry physically bad for us as well as emotionally draining?

(51) \_\_\_\_\_ (But) that is just one of several negative effects of anger. Researchers at Ohio State University found that a disagreement can also cause a surge in cytokines (immune molecules), which are connected to arthritis, diabetes, heart-disease and cancer. In people over 50, outbursts of only a few minutes can increase the risk of a heart attack or stroke by up to five times. According to research published in the *International Journal of Psychophysiology*, the results can be long lasting, too. Even a week after the event made us tense, we can still see increases in blood pressure when we think about what happened.

(52) \_\_\_\_\_ A long-term study in Michigan found that the risk of dying from conditions such as heart attack, stroke or cancer doubled in women who hid their anger during arguments. It therefore seems that both hiding anger and letting it out are bad for our health, though hiding it may prevent you angering others.

(53) \_\_\_\_\_ When you cry, you really do cry out negative emotion. Dr William Frey, a US biochemist, compared the tears of women [who cried for emotional reasons] with those [who cried on exposure to onions]. Emotional tears were found to contain high levels of hormones and neurotransmitters associated with stress. They also led to lower blood pressure and pulse rate. Dr Frey concluded that the purpose of emotional crying is to remove stress chemicals. He says the continued presence of these substances when you hold tears in would keep you in a needless state of tension. Your body would then be prone to the negative effects of anxiety, including weakened immunity, impaired memory and poor digestion.

(54) \_\_\_\_\_ We may think of romance as a stressful business, but researchers at the University of Pavia, Italy, would disagree. They found that a new relationship raises levels of Nerve Growth Factor for about a year. This hormone-like substance helps to restore the nervous system and improves memory by causing new brain cells to grow. It also starts a calming effect on the body and mind. Unfortunately, researchers found levels dropped after about a year from the point at which feelings of romance fall away.

Perhaps the most important lesson we can learn from this research is that it is important to stop negative emotions whenever possible or you will suffer, psychologically and physically. If you are in an argument or feel stressed, try to remove yourself from the situation and take deep breaths. This can lower your heart rate and blood pressure almost immediately. If you are having an argument, try to return to the room and discuss things calmly instead. If that is not possible, leave.

(55) \_\_\_\_\_ Visualising positive emotional states can start them in the body, with beneficial effects on health. The mind cannot differentiate between an imagined state and an actual 'external' state. So, if you vividly imagine a positive state, you may experience the benefits as if they are real. Visualise yourself laughing, joyful and full of energy—the more vivid you make it, the more effective it will be.

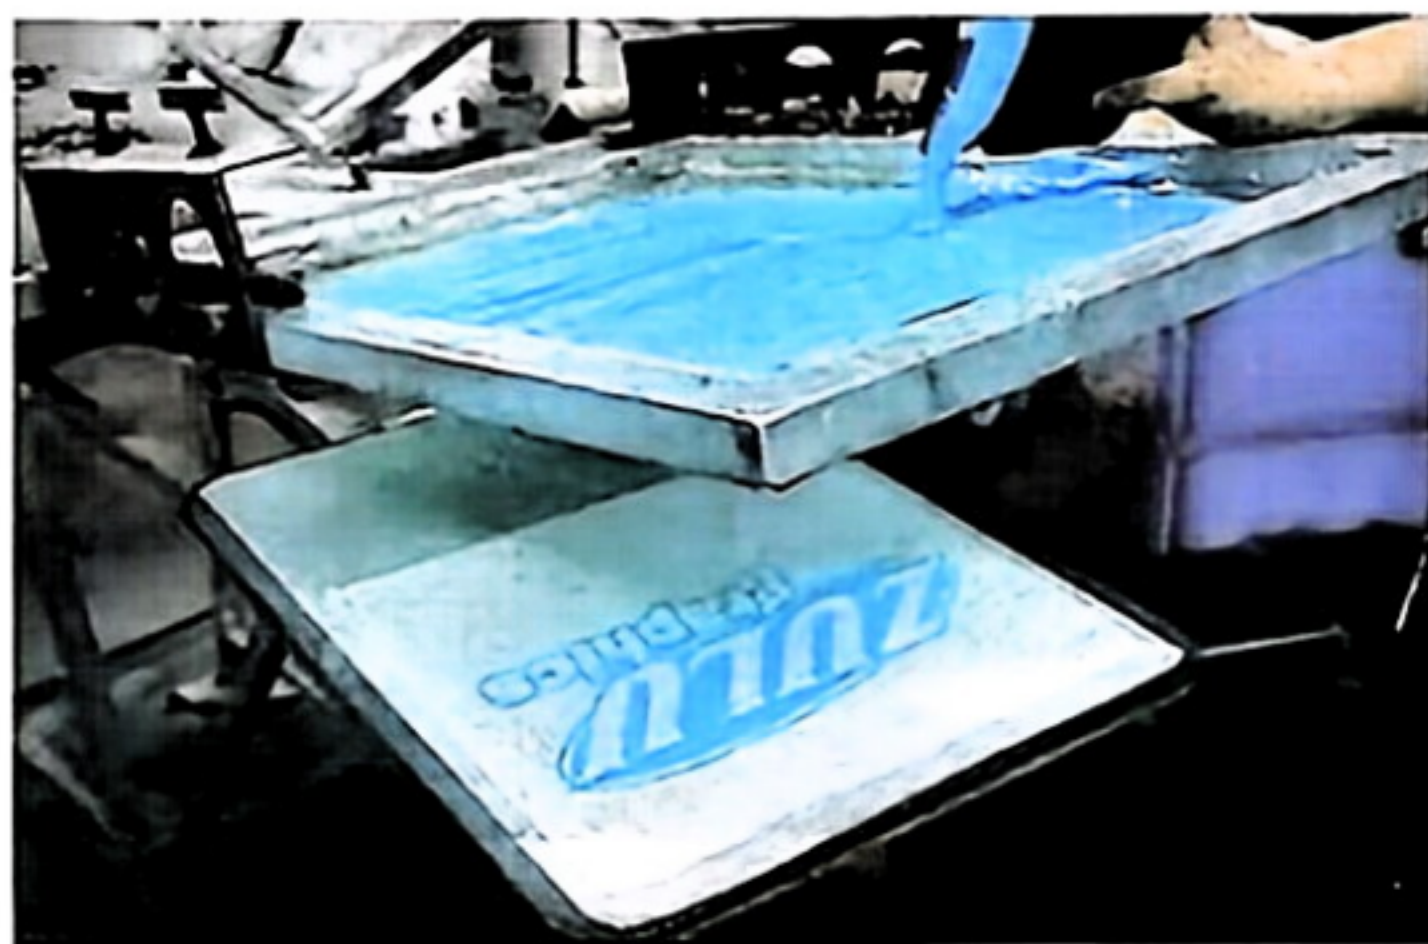

## Questions 51 to 55

Choose from the sentences A to G the one which best fits each gap of 51 to 55. There are two extra sentences which you do not need to use.

- ☒ A. We can also trick our body into feeling positive.
- ☒ B. Having said that, hiding your anger is perhaps no better.
- C. We should laugh more because it increases oxygen that enters the body.
- ☒ D. As you become more irritated, you feel like your blood pressure is increasing, which is exactly what is happening.
- E. Being thankful towards someone releases a chemical called oxytocin.
- ☒ F. One reaction to an argument that is often seen as weak—crying—may actually be good for our health.
- G. If negative emotions are so bad for us physically, what physical benefits can we gain from positive emotions?

## Section B (10 marks)

Questions 56 to 60 are based on the following passage.

Screen printing, also known as *serigraphy* (丝网印刷) or silk screen printing, has its origins in China 1,000 years ago. The technique evolved from the use of *stencils* (模板) to block out a shape as paint is applied to the rest of the surface. This leaves a silhouette of the stencil. Imagine placing your hand on a sheet of paper and then painting your hand and the paper together. When you remove the hand, you have a clear outline of it.

This is just the kind of experiment with painting that you can imagine a child doing. It is little surprise, then, that we have been doing it for thousands of years. In fact, one of the oldest cave paintings known has a series of hand silhouettes, done this way by artist or artists unknown. These paintings in a cave in northern Spain are believed to be over 40,000 years old.

The technique evolved from using found objects to cutting out the shape freehand. This works well with geometric shapes and was used in a lot of the designs from the ancient world. One obvious benefit of using stencils is that, once made, they can be used again and again, ensuring uniformity of design.

More complex designs involve cutting out parts of the inside of the stencil so that greater detail is reproduced when paint is applied, rather than just a plain outline. This works well as long as whole pieces

of the interior are not removed completely. Traditionally a small strip of the stencil material is left in place to keep the stencil in one piece. This naturally appears in the final image, providing a clue as to how it was made.

J. I. Biegeleisen describes the Japanese practice of using human hair glued across the gaps instead of larger strips of stencil material. The designer would hold the whole stencil together by carefully gluing hairs to parts of it. Biegeleisen claims that this was the forerunner of screen printing as designers noted that the paint would flood around the hair ensuring that the painted surface was unbroken.

Whether or not this was the case, designers began using a framed *mesh* (网格), originally made of silk and latterly of polyester, nylon and even stainless steel. The stencil is attached to this mesh and the whole frame is suspended a short distance above the surface to be painted.

In a two-part process, paint or ink is then added to the mesh and spread carefully over the whole area so that it fills the holes in the mesh. A blade is then passed over the mesh, pressing it into contact with the surface briefly, before the mesh springs away. The transfer of the design is then complete, although repeated sweeps may add further colours.

In a variation of this method, often used with printing onto fabric, the Japanese art of *Katazome* (型染) uses the stencil not to add the final colour, but to force a barrier paste through—typically a mixture of rice flour and water. When the fabric is covered in colour, the design is the part that has not absorbed the colour due to it being protected by the paste. A period of up to several months is allowed for the colours to set in the fabric, after which the material can be washed to remove the paste.

In 1907 Samuel Simon was granted a patent for his screen-printing technique. At this time, it was used to print wallpaper or to put designs on silk or linen. There followed a flurry of developments, and experiments were carried out with photo-reactive chemicals. Much of this work was focused on finding ways to make the ink or paint dry fast on the material so that it would not *smudge* (变模糊) or fade. The work also included finding less toxic replacements for the chemicals in use.

The technique led to a profitable industry and was also used to a greater or lesser extent by artists. Its current popularity in the art world is largely due to the resurgence in its use following work done by Andy Warhol in the 1960s. The method allows for the individual creativity of artists—so that it can be justifiably referred to as a work of art. It also combines the uniqueness of a single piece with the ability to produce a limited number of reproductions, calling to mind the woodcuts of famous artists from earlier centuries.

Commercially, of course, the larger the print run the better. In 1969, this was helped enormously by the rotary multicolour screen printing machine being patented. A brainchild of artist Michael Vasilantone, it was subsequently licensed by many manufacturers, helping to popularize the printed T-shirt. Screen printing is widespread today due to the large variety of surfaces that can be printed upon using the method. This often makes it the first choice for printing posters, and onto hats and DVDs, for example. Wider uses are also possible when print work is called for on ceramics, glass, plastics, metals or wood.

## Questions 56 to 60

Answer the following questions with the information given in the passage.

56. What is the advantage of using stencils in screen printing?
57. Why do more complex designs involve cutting out parts of the inside of the stencil?
58. What did Samuel Simon's 1907 patent contribute to the advancement of screen printing technology?
59. When did screen printing start to gain popularity as an artistic medium?
60. Who has played the greatest role in commercializing screen printing?

## Section C (10 marks)

Questions 61 to 65 are based on the following passage.

Going back 2,000 years, the Celtic language was dominant in Britain. Very few words are still used today but traces of them can be found in place names, many of which refer to geographical features such as the prefix *Pen-* (meaning *hill*) or *Ax-/Ex-* (meaning *water*). The Romans, who next occupied Britain for about 400 years, made a huge

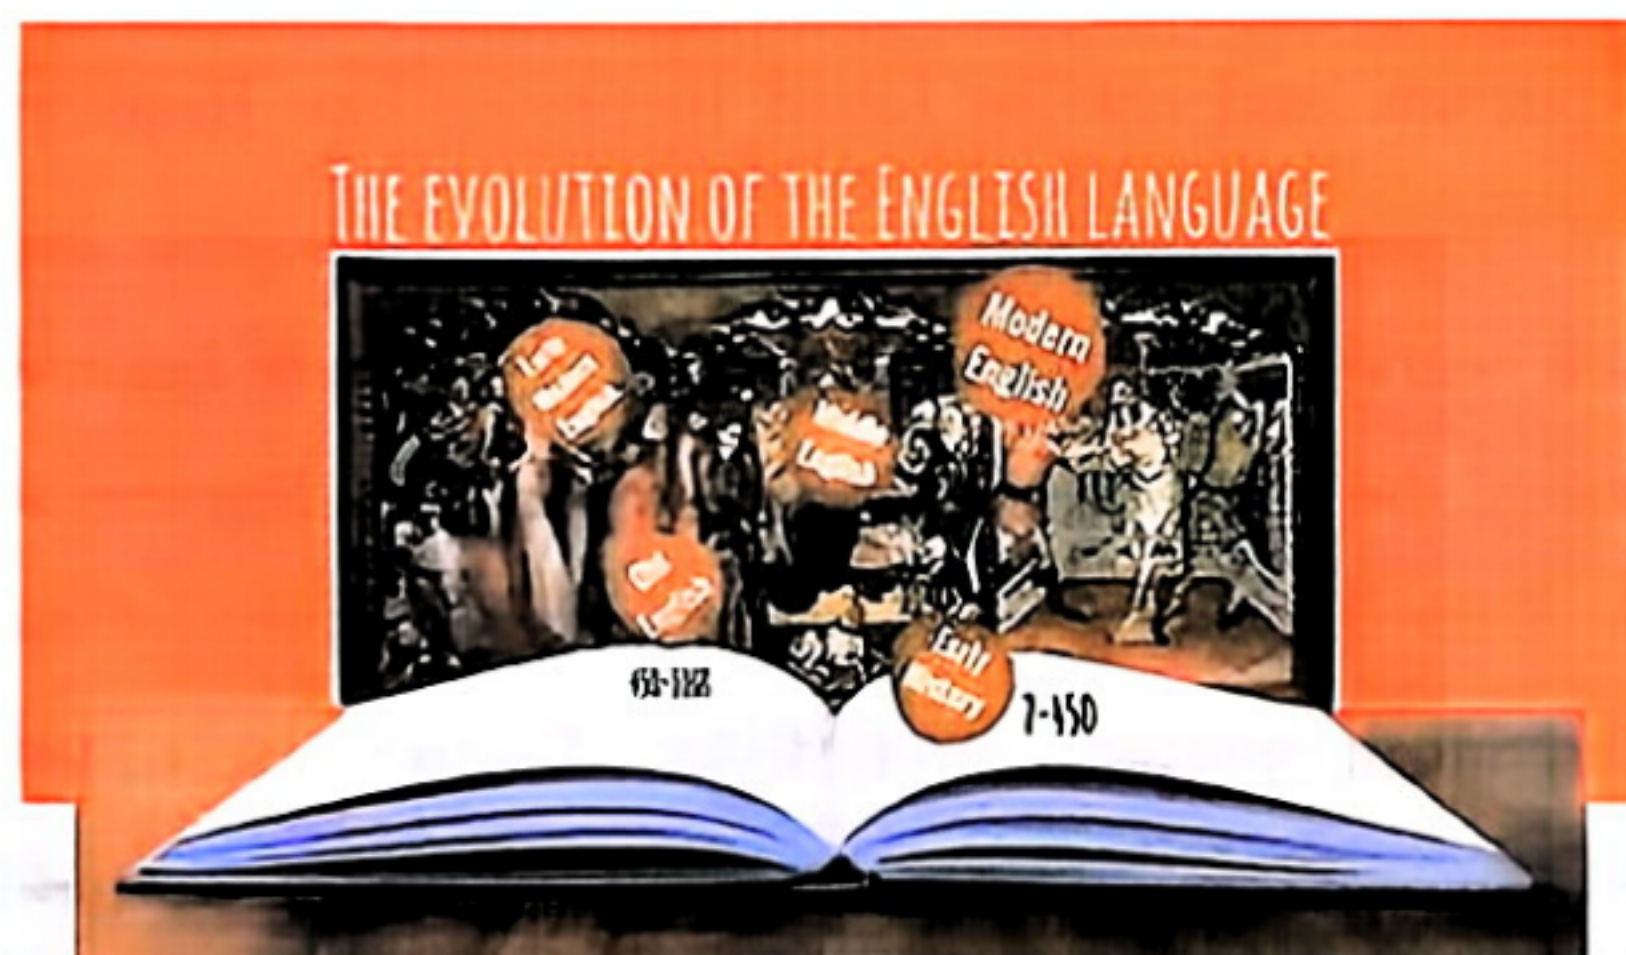

contribution to the culture, although Latin as a language was probably only adopted by the privileged and the city-dwellers. Words like *anchor*, *mile* or *mill* entered the language at this time, many of them coming to English via Latin from the original Greek. With the retreat of the Romans in the first half of the fifth century came the Angels, Saxons and Jutes from modern day Germany and Denmark. They introduced words like *butter*, *cheese* and *boat* into the language. Place names help identify where the Celts were displaced. The suffixes *-ing* (meaning *people*), *-ton* (meaning *village*), *-ford* (meaning *river crossing*), *-ham* (meaning *farm*) and *-stead* (meaning *site*) became common, and can be found in places like Reading, Luton, Birmingham, Hampstead and Bradford.

During the 6th and 7th centuries, the Anglo-Saxon sound *sk* became *sh*, meaning that *skield* became *shield* and *disk* became *dish*. Other changes led to some of the irregular spellings that confound learners of English today, such as *broad-breadth* and *long-length*. With the Viking invasions, the vast majority of the Anglo-Saxon language was wiped out, so that today only about one percent of Modern English words have roots in Anglo-Saxon. Of them, many are basic, high-frequency words like *brother*, *friend*, *make*, *but* and *at*. Typical Viking place names had the suffixes *-by*, *-thorpe* and *-thwaite*, giving us towns like *Whitby*, *Scunthorpe* and *Huthwaite*. In addition, the suffix *-ing* for people was supplanted by *-son*, leading to family names such as *Johnson* and *Stevenson*. The Old Norse language spoken by the Vikings led to another phenomenon in English—we kept both the old Anglo-Saxon word and the new one, leading to two words for the same thing, as in *wish* and *want* or *sick* and *ill*.

With the arrival of Christianity came greater literacy, and ~~runes~~ angular characters more suited to scratching onto wood or stone—were replaced by the more rounded Latin letters (we recognise today). This alphabet was supplemented by some of the runes that had existed before to enable the writing down of sounds that were not covered by Latin. Many of the words added to English were religious in nature, such as *church*, *priest* and *hymn*. The English spoken at the time is known as Old English and there is a body of literature from this time which has given us great insight into the language and culture of the period.

When Britain was invaded by Normandy (northern France) in 1066, another major change began and this event is said to be the starting point for Middle English. Old English words were replaced and modified, sometimes forming compounds of both, as in the word *gentleman*, which combines a French and an Anglo-Saxon word. Sometimes both words survived as synonyms, as in *labour* and *work*, *aid* and *help*, or *liberty* and *freedom*. Some idiomatic pairs, such as *ways* and *means*, or *law* and *order* also stem from this period. Many words of Latin origin entered the English language, either directly or via French. This was a period of great instability in the language, and French, together with Anglo-French or Anglo-Norman dominated. English was spoken more often than written, usually by the poorer classes.

A protracted period of war with the French (1337–1453), the rise of the working classes, and the installing of an English-speaking king on the throne (Edward III) all contributed to the resurgence of English as a language. The works of Chaucer around this time are considered to be the beginning of English literature, although Chaucer's writing is greatly influenced by French and contains remarkable inconsistency in terms of spelling. Although we cannot be sure of how Chaucerian English sounded, we know that major changes in pronunciation were under way, leading to the Great Vowel Shift between the 15th and 17th centuries. The many regional dialects and the lack of a standardised form led to the reason why words spelled similarly, like *food* and *good*, for example, are usually pronounced differently in England, whereas in Scotland they are more likely to sound similar. Silent letters, perhaps the least logical phenomenon for learners of English, came into being, leaving us with challenging spellings such as *comb*, *walk* and *knight*, with their unpronounced *b*, *l* and *k* respectively.

From the 16th century on, we talk about the English Renaissance—a period of revived interest in classical knowledge. This naturally brought fresh waves of vocabulary from Greek and Latin, when words like *astronomy* made its older English form *starlore* obsolete. In literature during this time we have Shakespeare, whose inventiveness with the language is legendary. Shakespeare was

both knowledgeable—resurrecting words that were falling out of favour—and enduring, with many of the phrases he coined still in use today. Modern readers might have difficulty understanding the language from this time; however, by the 18th and 19th centuries, works of literature started to appear which, with the exception of a few antiquated words and phrases, should present little difficulty for a reasonably educated reader of today.

## Questions 61 to 65

Complete the summary below with the information from the passage, using no more than four words for each blank.

Before the Roman occupation, Celtic languages were dominant in Britain, leaving behind remnants in place names related to geography. Latin contributions became part of the language during (61) \_\_\_\_\_ occupation, especially among the elite and urban populations. Many words entered English via Latin from Greek. After the Romans withdrew, Germanic tribes (Angles, Saxons, Jutes) introduced new vocabulary and changed the sound system, with many place names reflecting their presence. Scandinavian invasions introduced (62) 7 \_\_\_\_\_ into English, contributing to the dual vocabulary phenomenon and altering some linguistic patterns. The spread of Christianity brought Latin-based writing and religious terminology, replacing the runic alphabet previously used. The invasion by (63) \_\_\_\_\_ in 1066 marked the beginning of Middle English, introducing French words and leading to the coexistence of English and French for several centuries. Prolonged wars with France, social changes, and the crowning of an English-speaking king led to the renewed prominence of English. (64) \_\_\_\_\_ work exemplifies this period. Pronunciation changes significantly between the 15th and 17th centuries, affecting how words are spoken and leading to inconsistencies in spelling. During the Renaissance, Shakespeare enriched the language with inventive phrases and revived older words, many of which remain in use today. By the (65) \_\_\_\_\_ centuries, English literature began to resemble modern English more closely, with fewer archaic elements.

## Part V Translation (15 marks)

### Section A (5 marks)

Translate the following paragraph into Chinese. Remember to write the answers on the **answer sheet**.

66. For many of us, the combined demands of work, home and family mean that we are always feeling like we don't have enough time. Recent research suggests that the *antidote* (解药) to our lack of time may lie in the natural world. For example, people are more likely to perceive a walk in the countryside as longer than a walk of the same length in the city. It's not just our sense of time in the moment [which appears to be altered by the natural world] it's also our sense of the past and future. Previous research shows that spending time in nature helps to shift our focus from the immediate moment towards our future needs.

**Section B (10 marks)**

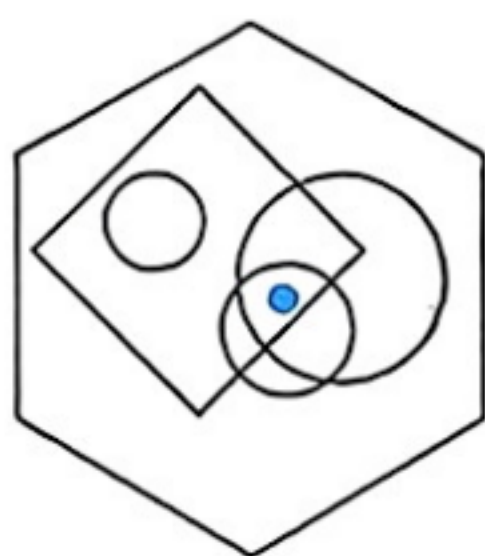

*Translate the following paragraph into English. Remember to write the answers on the answer sheet.*

67. 北京中轴线位于北京老城中心,北起钟鼓楼,南至永定门,全长 7.8 公里。它纵贯南北,包含 15 处遗产构成要素,是统领整个老城规划格局的建筑与遗址组合体。北京中轴线始建于 13 世纪,成型于 16 世纪,此后不断完善。历经逾 7 个世纪的建设,北京中轴线形成了秩序井然、气势恢宏的城市建筑群。

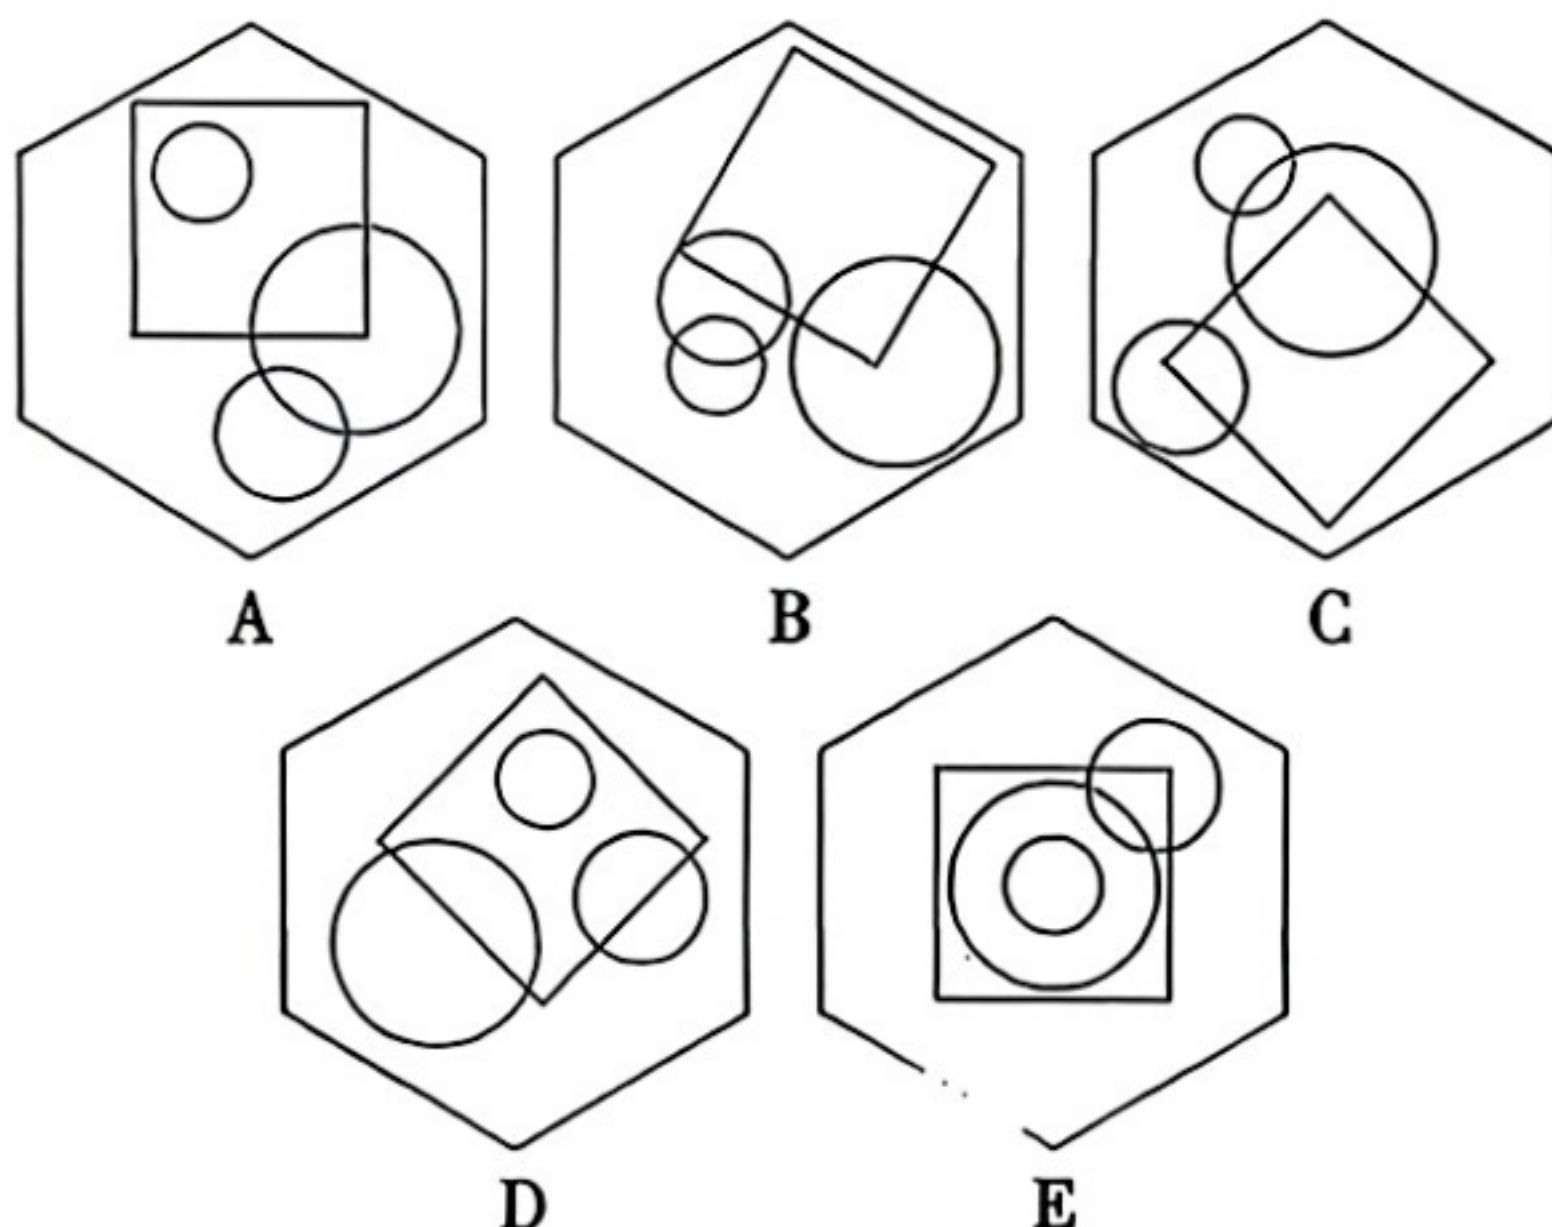

**Part VI IQ Test (10 marks)**

*There are five IQ Test questions in this part. Write the answers on the answer sheet.*

**glance, anchor, charge, casino, arcade**
70. Three brothers joined the army on the same day. Alf comes home once every 5 days, Sid comes home once every 4 days and Jim comes home once every 11 days. How often will all three meet up together?
- 71.

To which hexagon below can a dot be added so that it then meets the same conditions as in the hexagon above?  $\ominus$

72. What number should replace the question mark?  
52, 25, 77, 77, ?, 451, 605

## Part VII Error Correction (10 marks)

There are 10 errors altogether in the following passage. The errors are: missing words, unnecessary words and wrong words. Please correct them as follows: for a missing word, mark its position with the symbol “^” and write it; for an unnecessary word, cross it out with the symbol “\”; for a wrong word, underline it and write the correct word. An example of how to correct the error is provided below. Write the answers on the answer sheet.

For example:

One of my favourite writers are Charlotte Brontë. She was born in the early is nineteenth century when women had far fewer opportunities ^ they have now. than She lived in a small village in Yorkshire and she took \ a great pleasure in a walking on the moors near her home.

There have been a number of scientific advancements in the last decade; some have affected individuals, others the whole world. Not until I heard about this one, however, do I really start to think about my lifestyle and the effect it may be having in my health. The advancement in question was developed as a result of extent research, and it involves a wristband which uses people's DNA to help them make the right nutritional choices.

It all started when a professor of biomedical engineering, Professor Chris Toumazou, decides to carry out research when his son became ill as a result of a rare genetic disease which resulted in kidney failure. Giving that the professor's research confirmed the huge impact lifestyle has on many undiagnosed conditions in humans, Professor Toumazou set about assisting people in changing his lifestyles by creating a wristband that uses their DNA.

Basically, by analyzing the part of your genetic code that determine vulnerability to nutrition-related health conditions, the wristband can tell which foods are suited to you and which you should avoid, on condition where you wear it when you go shopping. All you have to do is scan the barcodes on the food packaging. Supposing the food is appropriate for you, the wristband will show a green light. Should the opposite be true, the wristband will show a red light. The truth is, seldom do we consider with the nutritional value of the food we buy; it is often only the calories we think about.

In a nutshell, it is not question of telling you what to eat, but of informing you what to eat based on your DNA and lifestyle.
